MECHANICAL PULVERIZER

Mechanical Concrete Pulverizers are highly versatile demolition and processing tools. Simple to fit and operated from the machines existing bucket cylinders they provide an efficient solution to most general demolition tasks. Supplied to fit machines from 6 to 100 tonnes complete with bracket and brace arm. The optional ripper tooth aids in the lifting and prying of floor slabs whilst a rebar shear (fitted to all models as standard) in the throat slices through the toughest reinforcing wire. Mechanical Pulverizers can also be manufactured as universal fitting to suit both quick-hitch and standard stick mounting.
